Specimen Collection

TEST KIT
EXPRESS

Training in specimen collection is recommended because of the importance of specimen quality. Use the swabs provided in the test Kit.

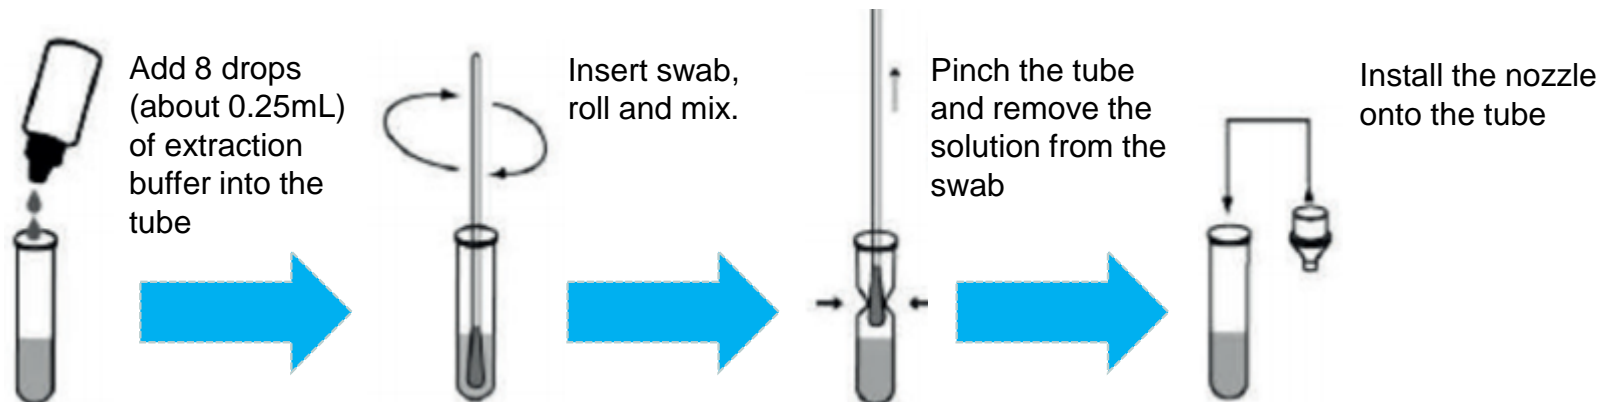

1. Carefully insert the swab into the nostril of the patient, reaching the surface of the posterior nasopharynx that presents the most secretion.
2. Swab over the surface of the posterior nasopharynx. Rotate the swab several times.
3. Withdraw the swab from the nasal cavity.

Specimen Preparation

TEST KIT
EXPRESS

1. Add 8 drops (about 0.25mL) of extraction buffer into the extraction tube.
2. Place the swab with the specimen into the extraction tube. Roll the swab three to five (3-5) times. Leave the swab in the extraction buffer for 1 minute.
3. Pinch the extraction tube with fingers and remove the solution from the swab as much as possible. Dispose of the used swab in accordance with your biohazard waste disposal protocol.
4. Install the nozzle cap onto the sample extraction tube tightly. Use the extraction solution as test specimen.

Results Procedure & Interpretation

TEST KIT
EXPRESS

1. Open the pouch and remove the card. Once opened, the test card must be used immediately. Label the test card with the patient identity.
2. Invert the extraction tube and add 2-3 drops (50-75 μ L) of test specimen to the well (S) by gently squeezing the extraction tube.
3. Read the results in 2-15 minutes – a positive result may be seen quickly and will be valid

Note: Results after 20 minutes should be considered invalid.
